DEAR LADIES AND GENTLEMEN,

With the new presentation of our highly productive quick-change system, we are presenting ourselves this year at the EMO in Hannover.

Simultaneously, digital fine boring heads are being presented for machining diameters from 0.3 mm up to 2200 mm. The analog spindle program is now available completely in digital. Due to the digital display, simplified and µ-precise adjustments are possible.

Have we peaked your interest?

If so, we would be happy to provide you with a free admission ticket and look forward to a personal acquaintance.
