

Due to the great interest during the world's leading exhibition for the metal processing last month, we would like to inform you about our latest development in the digital field in our newly developed digital finishing cartridge.

DIGITAL FINISHING CARTRIDGE

The digital finishing cartridge is adjustable and very precise. Due to the accuracy of the adjustment of only 0.001mm in diameter, error-free dimensional correction is guaranteed directly on the machine.

DRIVING PRODUCTIVITY - Maximum accuracy and ease of handling reduces downtime, increases quality and productivity.

DIGITAL - Dimensional corrections are displayed on the illuminated digital display. Virtually no backlash because of the direct measuring system. This eliminates possible sources of error and ensures a stable and efficient production process.

The DIGITAL FINISHING CARTRIDGE is ideal for use in single or multi-cutting tools.

The installation dimensions
correspond to the ISO-FINISHING-
CARTRIDGE.

Easy Handling

- display unit will be docked with magnetic forces at the tool
- display is reversible (LH/RH)
- direct measurement system (no backlash)
- 0.001 accuracy in diameter

Please do not hesitate to contact us for any further questions.
